This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement no. 776604.

CLEVER Cities

Regenerating cities with nature

Hamburg, London and Milan are making nature-based interventions in key districts of their cities for urban regeneration.

CLEVER Cities aims to drive a new kind of nature-based urban transformation for **sustainable** and **socially inclusive** cities across Europe, South America and China through:

- exchange between cities
- inclusive collaboration
- multi-disciplinary learning

Aims

Vauxhall Rain Garden / Copyright: Greater London Authority

- Increase and improve local knowledge of nature-based solutions
- Demonstrate that greener cities work better for people and communities
- Contribute data and information to EU policy-making
- Promote and enable the uptake of nature-based solutions in urban planning world-wide

CLEVER cities are green

Urban nature improves the environment, creates economic opportunities and makes cities healthier places to live. Green spaces also bring people together, which makes our communities more resilient, as well as boosting urban resilience to climate change.

Citizens in **Hamburg** will help introduce new green roofs and facades as well as green links to NEUGRABEN- FISCHBEK. Pupils will be engaged in nature projects including, among others, the co-creative and eco-friendly redesign of a school playground.

Hamburg / Citizens of Neugraben-Fischbek

CLEVER cities are community-driven

Local teams including citizens, businesses, knowledge partners and local authorities have been formed in Hamburg, London and Milan. This collaborative structure will ensure that the urban transformation process is open, inclusive and tailored to local needs.

Bottom-up projects in **Milan** will promote green roofs and walls, green infrastructures and noise barriers, and locals will decide how to make space for urban gardening in LORENTEGGIO-GAMBELLINO DISTRICT and around the TIBALDI train stop.

Milan/ Citizens of Gambellino

CLEVER cities are innovative

We build on local capacities, expertise and potential to generate innovation and to develop new future-proof governance, financing and business models for sustainable prosperity.

In London, new planting, raingardens and swales will green walking routes to improve connections and encourage people to be more active. A new smart green-blue roof and lakeside improvements will help to transform SOUTH THAMESMEAD.
